

Quality, Environment, and Safety Policy

Akkee Prakarn Public Company Limited is a comprehensive service provider offering transportation, industrial waste treatment through incineration, scientific analysis laboratories, and after-sales service from a knowledgeable and skilled support team. We are committed to developing our services to ensure customer satisfaction, building trust in our laboratory analyses, and recognizing the importance of minimizing environmental impact. We also prioritize the safety of our employees. To eliminate risks that could affect the company's business operations, we have established the following Quality, Environment, and Safety Policy:

"Follow the rules, reduce pollution, think innovatively, ensure customer satisfaction, and care for your personnel."

And in order for Akkee Prakarn Public Company Limited's operations to comply with the Quality, Environment, and Safety policies, as well as to align with operational planning and achieve related requirements, the company has defined objectives and goals as announced in the Standard Management System Objectives and Goals.

Subject: Objectives and Goals of the Standard Management System

In order for Akkee Prakarn Public Company Limited's operations to comply with the Quality, Environment, and Safety policies, and to align with operational planning and achieve relevant requirements, the Company has established the following objectives and goals:

1. Provide quality services to meet customer needs by improving service processes and managing waste efficiently, resulting in no service complaints. 2. Promote 100% of business partners to participate in the Thai Private Sector Anti-Corruption Alliance (CAC), and ensure 100% of business partners have environmental management practices or environmental management plans.
2. Comply with all relevant laws and regulations concerning the environment, safety, occupational health, and working environment, as well as customer requirements.
3. Control, prevent, and reduce the environmental impact of operational activities by reducing greenhouse gas emissions from operations by 1% from the base year (2023) and achieving 100% improvement in green areas within the factory.
4. Promote personnel development to instill a sense of social responsibility, environmental responsibility, and safety awareness.
5. Support and promote a safe work environment to reduce accidents, risks, injuries, illnesses, and occupational diseases in all processes and departments, aiming for a zero work-related accident rate.
6. Promote environmental community engagement activities and provide education to external communities, achieving an 85% satisfaction level from the community.
7. Demonstrate a commitment to respecting, protecting, and promoting human rights throughout the operational process, establishing systematic measures for preventing, controlling, and monitoring risks of human rights violations. Furthermore, provide appropriate, transparent, and fair mechanisms for complaints, investigations, and remedies, with no complaints of human rights violations arising from the organization's operational processes.
8. Encourage employee participation in quality, environmental, and safety management systems.
9. Create a corporate culture of continuous improvement.
